TECHNOLOGY

DAUBERT Industries, founded in 1948 by George Daubert invented the DAUBERT VCI® Films which is one of the most advanced technologies to be used for packing known as the Volatile Corrosion Inhibition technology. These films are manufactured with special multi-layer technology that makes DAUBERT VCI® films much better performer than the other available VCI Films in the market.

Being a pioneer in the field of Volatile Corrosion Inhibition Technology, DAUBERT VCI® Films provides a much advanced corrosion inhibiting technologies, and provides a total corrosion protection system for all kind of metallurgies whether ferrous or nonferrous.

DAUBERT VCI® Films are equipped with a multi-layer technology to prevent it from any kind of export damages with a high strength layer, along with a moisture resisting layer to restrict the introduction of moisture on the components and a volatile corrosion inhibitor layer to protect the components from corrosion.

DAUBERT VCI® Films provides a complete packaging solution with a much greater corrosion protection, extended upto 2 years for any kind of metal and gives protection to the metal from any kind of moisture or corrosion to happen along with cushioning to safeguard the same from any physical damage. The VCI Films from Zavenir Daubert are simple to use and can be easily customized as per the need.

So any kind of metal ferrous or non-ferrous, iron or steel can now be packed with complete safety from being rusted or damaged even if kept untouched for a long period of time. So keep the expensive materials packed with the DAUBERT VCI® Films from Zavenir Daubert for a longer and stronger life.

FEATURES

- Lower Moisture vapour transmission rate (MVTR)
- High dart impact strength
- Effective volatile corrosion inhibitors (VCI)

BENEFITS

Barrier protection: Protects against both moisture and corrosion

Cushioning from physical damage

Customization & ease of application

Premium Metal-Guard®

GRADE	APPLICATION	METALS PROTECTED	PROTECTION PERIOD
PMG FILM	Multilayered VCI films for premium protection		
PMG STRETCH FILM	Multilayered VCI stretch films for metal wrapping		
PMG BUBBLE FILM	VCI treated bubble film for damage & corrosion protection		
PMG HIGH STRENGTH FILM	Specially Designed film for high barrier & extreme strength		
PMG FOILS	VCI laminated with Aluminium foil to give extreme barrier		
PMG FLUTE BOARD	PP corrugated board impregnated with VCI		
PMG FOAM	open cell from VCI		Upto 2 yrs
PMG REINFORCED FABRIC	HDPE woven fabric treated with VCI		
FERRO-FILM	Economy grade for protection of ferrous items		
		Combination of ferrous and non-ferrous metals	
		Iron & Steel	Upto 2 yrs
